Introduction - Garment design is an integration of all the design elements, including colour, texture, space, lines, pattern, shape, balance, proportion, emphasis or focal point, rhythm and harmony. Each of these contributes towards the visual perception and psychological comfort of the garment. Fashion designers attempt to design clothes which are functional as well as aesthetically pleasing. The most obvious function of clothing is to protect the wearer from the elements. Design influences what we think, the way we feel and the decisions we make.
